SUMMARY

Full-Stack Software Engineer with 1+ year of experience building scalable and distributed systems. Proficient in Go, TypeScript, React.js, and Kubernetes, with contributions to open-source including Google and OpenTelemetry.

EDUCATION

State Islamic University of Imam Bonjol Padang

Bachelor's Degree, Information Systems

Padang, Indonesia

August 2022 - November 2026

EXPERIENCE

Software Engineer (Contract)

September 2025 - December 2025

TIME Language Centre

Padang, Indonesia (Hybrid)

- TIME is a **10+ year institution** and official **IDP IELTS Test Centre** undergoing **digital transformation**.
- Orchestrated technical development for **2 mission-critical systems** (ERP & Online Course Platform) across **3 teams**, standardizing code quality and CI/CD pipelines to accelerate deployment cycles.
- Architected and deployed **scalable microservices** using Go and Node.js on **Kubernetes** (K3s), applying **DDD** and adopting **Event-Driven Architecture** with RabbitMQ and Redis for high availability.
- Built **real-time observability** suite using Prometheus, Grafana, and Loki, cutting incident **MTTR by 50%+**.
- Enforced **90%+** Unit Test coverage using Go Test and Jest, bolstering system reliability across all services.

Software Developer (Part-time)

April 2025 - November 2025

CodeAtHome

Remote

- CodeAtHome is an **Indonesian software agency** delivering web, mobile, AI solutions across enterprise verticals.
- Collaborated cross-functionally to ship core platform features and resolve critical bugs, maintaining high quality.
- Reduced redundant API calls by **40%** via advanced **TanStack Query** caching and optimistic update patterns.
- Ensured scalable state management across complex user flows by architecting a robust global store using **Redux**.
- Built a reusable UI component library, accelerating feature delivery by **30%** and cutting boilerplate.

Software Engineer Intern

January 2025 - March 2025

Auto2000 (Astra International)

Labuhanbatu, Indonesia (Onsite)

- Auto2000 is **Indonesia's #1 Toyota dealer** with **100+ branches** across Southeast Asia's largest auto market.
- Built a Next.js dealership platform featuring **AI-powered** car recommendations to drive user engagement.
- Engineered a customer document reminder system with **RBAC**, replacing vendors to slash workload and costs.
- Devised a Python **Automated Data Preprocessing Pipeline** to process **15 years** of legacy vehicle data, reducing processing time by **98%**.

PROJECTS

Slither | Go, Docker, Redis, WebSocket, Postprocessing, React Three Fiber

[GitHub](#)

- Engineered a **high-concurrency** multiplayer game server in Go, leveraging **Redis Pub/Sub** for state synchronization and **O(1) Spatial Hashing** to manage collisions for **10,000+** entities.
- Slashed bandwidth usage by **95%** implementing **delta compression** and maintained **60 FPS** synchronization using **Client-Side Prediction and Reconciliation**.

Personal Website | TypeScript, Next.js, MDX, Docker, Bun, Elysia, Serverless, LLM

[GitHub](#)

- Designed high-performance portfolio with custom MDX blog engine achieving **98+** Lighthouse score.
- Integrated **AI chatbot** with streaming responses and Guestbook service using **Bun/Elysia**, driving engagement.
- Implemented multi-turn conversation context and optimized API cost via caching and prompt engineering.
- Shipped **11+ production applications** across full-stack, mobile, AI domains with **50+** repositories.
- Published **technical blog** covering system design and engineering deep-dives. ([Blog](#))

OPEN SOURCE CONTRIBUTIONS

- Google Go GitHub**: Fixed JSON unmarshalling in Enterprise billing API by correcting type definitions. ([PR](#))
- OpenTelemetry Collector**: Prevented Prometheus errors by removing deprecated legacy references. ([PR](#))
- Meilisearch Go Client**: Unlocked filtering by refactoring type constraints for array-based queries. ([PR](#))
- Next AI Draw IO**: Engineered shadow system to optimize scroll responsiveness and visual hierarchy. ([PR](#))

TECHNICAL SKILLS

Languages: Go, Rust, TypeScript, JavaScript, Java, Python, SQL, HTML, CSS

Tech Stack: Node.js, Bun, Fiber/Gin (Go), Spring Boot, PostgreSQL, MySQL, MongoDB, REST APIs, GraphQL, gRPC, React.js, Next.js, React Native, Redux, Zustand, TanStack, Tailwind CSS, Postman, Playwright, Jest, K6

Infrastructure : AWS/GCP, Docker, Kubernetes, NGINX, RabbitMQ, Redis, GitHub Actions, Jenkins, Prometheus, Grafana, Loki, OpenTelemetry
