Education

State Islamic University of Imam Bonjol Padang August 2022 – September 2026

Bachelor of Science in Information Systems (Graduated September 2026) *Padang, Indonesia*

- **Relevant Coursework**: Data Structures & Algorithms, Discrete Mathematics, OOP, Operating System, Database, Network, Security, Software Engineering, QA, Systems Analysis & Design, Business Process Analysis.
- **Undergraduate Thesis**: Engineered an event-driven microservices backend (Go, TypeScript, RabbitMQ, PostgreSQL, Redis) processing **14.1k+ async payment webhooks** with **0% message loss**, sustaining **96.5 RPS (0% error rate @ 200 VUs)** and cutting P95 latency by **58.9% (to 55.7ms)** via horizontal scaling. (Thesis)

Experience

Software Engineer Intern September 2025 – December 2025

TIME Language Centre – 10+ Yr Institution & Official IDP IELTS Centre *Padang, Indonesia (Hybrid)*

- Partnered with Operations and Academic stakeholders to translate business requirements into technical specs; directed architecture across 2 teams, standardizing service boundaries, API contracts, and CI review gates.
- Architected an event-driven Go/Node.js course platform, decoupling services via **RabbitMQ** and **Redis**; authored **119+ tests** and eliminated single-replica bottlenecks via **k6** to achieve **0% error rate** at peak load.
- Translated institutional compensation rules into a modular **TypeScript/Prisma** ERP with 7-role **RBAC**, automating multi-tier tutor payroll engines and geofenced attendance to eliminate error-prone Excel workflows.
- Drove production reliability by orchestrating containerized services on **Kubernetes (K3s)** behind an **NGINX** TLS proxy, tracking real-time latency, error spikes, and cluster health via **Prometheus, Grafana, and Loki**.

Software Developer (Part-time) April 2025 – December 2025

CodeAtHome – Enterprise Software & AI Agency *Remote*

- Partnered with Product and Design to ship production REST APIs across 2 client platforms, accelerating delivery.
- Optimized system performance and slashed API latency by standardizing client caching via **TanStack Query**.
- Maintained high code quality and cut integration bugs by engineering reusable, type-safe API clients and UI components.

Software Engineer Intern January 2025 – March 2025

Auto2000 – Indonesia's #1 Toyota Dealer (Astra International AI-TSO) *Labuhanbatu, Indonesia (Onsite)*

- Partnered with Sales and Marketing to translate buyer journey requirements into a **Next.js** sales portal with AI vehicle recommendations and WhatsApp routing, boosting customer lead conversion and accelerating deal closings.
- Eliminated recurring SaaS costs by engineering an internal multi-branch operations app with **RBAC** via **Supabase**.
- Eliminated manual audits by automating **Python ETL** pipelines to sanitize **15 years** of legacy records (**38k+/year**).

Projects

Additional projects at kiril.is-a.dev/projects

PerfGuard: Statistical Regression Detector | *Go, pprof, CI/CD, Statistics* GitHub

- Built an open-source performance regression detector in **Go** to automate PR-gated A/B benchmarks; implemented **Mann-Whitney U** testing with **Benjamini-Hochberg** correction to prevent latency regressions.
- Engineered a measurement engine with **git worktree isolation**, interleaved A/B execution to eliminate hardware/thermal bias, and bootstrap confidence intervals with coefficient of variation noise filtering.
- Architected a clean 17-package CLI (**>80% test coverage**) with isolated I/O boundaries and schema versioning; integrated automated **pprof** differential profiling and effect-size gating into **GitHub Actions**.

Open Source Contributions

- **Nushell**: Prevented pipeline crashes on invalid UTF-8 inputs with graceful stream byte recovery. (Merged PR)
- **Prometheus Go Client**: Cut GC overhead and memory allocations on metric collection paths. (Merged PR)
- **Google pprof**: Fixed cross-platform CI/CD test failures and eliminated disk I/O overhead. (Merged PR)
- **Google go-github**: Prevented production JSON unmarshalling crashes on Enterprise billing responses. (Merged PR)

Honors & Certifications

- **AstraPay Hackathon 2026** – Finalist (Top 10 nationally): Built real-time QRIS credit scoring for MSMEs.
- **Certifications**: **Oracle** OCI 2025 Certified AI Foundations Associate (Badge) | **HackerRank** Software Engineer Intern (Cred) | **Dicoding**: Back-End JavaScript (Cred), Machine Learning Systems (Cred) & Generative AI (Cred).

Technical Skills

Languages: Go, TypeScript, Python, Rust, SQL, Bash | **Technologies**: Docker, Kubernetes, NGINX, AWS, Prometheus, Grafana, Loki, k6, Redis, RabbitMQ, PostgreSQL, MongoDB, DynamoDB, OpenTelemetry, gRPC.
