Education

State Islamic University of Imam Bonjol Padang August 2022 – September 2026
Bachelor of Science in Information Systems (Graduated September 2026) *Padang, Indonesia*

- **Relevant Coursework**: Data Structures & Algorithms, Discrete Mathematics, OOP, Operating System, Database, Network, Security, Software Engineering, QA, Systems Analysis & Design, Business Process Analysis.
- **Undergraduate Thesis**: Engineered a Go/RabbitMQ benchmark evaluating **34k+ requests at 200 VUs**; cut P95 latency by **58.9%** and proved zero message loss across **14k+ fault-injected events**. (Thesis)

Experience

Software Engineer Intern September 2025 – December 2025
TIME Language Centre – *10+ Yr Institution & Official IDP IELTS Centre* *Padang, Indonesia (Hybrid)*

- Designed and shipped a 4-service Go/Node.js course platform with **RabbitMQ** domain decoupling, DLQ recovery, **Redis** caching, **Xendit** payments, and **Bunny.net** video; validated via **k6 load tests (0 failed requests)**.
- Deployed services on Kubernetes (K3s) behind an Nginx TLS reverse proxy; configured Prometheus, Grafana, and Loki dashboards for health, latency, and error observability.
- Authored **119+ unit, integration, and E2E tests** across 5 critical workflows; diagnosed single-replica bottlenecks using **k6** load testing prior to horizontally scaled deployment.
- Built an internal operations backend that automated course scheduling for **20+ staff**, replacing spreadsheet-based workflows and introducing review-gated changes for the service codebase.

Software Engineer (Part-time) April 2025 – December 2025
CodeAtHome – *Enterprise Software & AI Agency* *Remote*

- Architected and integrated REST APIs across **4+ client applications**, standardizing API contract interfaces, error handling, and shared data-fetching patterns across projects.
- Optimized client-server caching via **TanStack Query**, eliminating redundant roundtrips and slashing API latency.
- Engineered a type-safe API client and modular UI layer, enforcing uniform serialization and cutting boilerplate.

Software Engineer Intern January 2025 – March 2025
Auto2000 – *Indonesia's #1 Toyota Dealer (Astra International AI-TSO)* *Labuhanbatu, Indonesia (Onsite)*

- Shipped a Next.js dealership platform with a guided vehicle recommendation flow, matching customer search criteria.
- Engineered an automated document expiry reminder system with **RBAC**, eliminating manual tracking.
- Automated cleaning and migration of **15 years** of legacy service records (**38k+/year**) via Python.

Projects

Additional projects at kiril.is-a.dev/projects

PerfGuard: Statistical Regression Detector | *Go, pprof, CI/CD, Statistics* GitHub

- Built an open-source performance regression detector in **Go** to automate PR-gated A/B benchmarks; implemented **Mann-Whitney U** testing with **Benjamini-Hochberg** correction to prevent latency regressions.
- Engineered a measurement engine with **git worktree isolation**, interleaved A/B execution to eliminate hardware/thermal bias, and bootstrap confidence intervals with coefficient of variation noise filtering.
- Architected a clean 17-package CLI (**>80% test coverage**) with isolated I/O boundaries and schema versioning; integrated automated **pprof** differential profiling and effect-size gating into **GitHub Actions**.

Open Source Contributions

- **Nushell**: Prevented pipeline crashes on invalid UTF-8 inputs with graceful stream byte recovery. (Merged PR)
- **Prometheus Go Client**: Cut GC overhead and memory allocations on metric collection paths. (Merged PR)
- **Google pprof**: Fixed cross-platform CI/CD test failures and eliminated disk I/O overhead. (Merged PR)
- **Google go-github**: Prevented production JSON unmarshalling crashes on Enterprise billing responses. (Merged PR)

Honors & Certifications

- **AstraPay Hackathon 2026** – Finalist (Top 10 nationally): Built real-time QRIS credit scoring for MSMEs.
- **Certifications**: **Oracle** OCI 2025 AI Foundations (Badge) | **HackerRank** Software Engineer Intern (Cred) | **Dicoding**: Back-End JavaScript (Cred), Machine Learning Systems (Cred) & Generative AI (Cred).

Technical Skills

Languages: Go, TypeScript, Python, Rust, SQL, Bash | **Technologies**: Docker, Kubernetes, NGINX, AWS, Prometheus, Grafana, Loki, k6, Terraform, Redis, RabbitMQ, PostgreSQL, MongoDB, DynamoDB, OpenTelemetry, gRPC.
